

## REPORTING HORSE WITH EU-PASSPORT TO THE DATABASE

**Horse's owner is itself responsible for horse's right identification being reported to the database. An individual and its offspring don't have the right to attend to a horse show or to a harness race and the offspring aren't registered to the breed's pedigree. For one to be able to use the horse in breeding, horse shows or harness racing, must the horse be identified by an identifier accepted by Suomen Hippos ry. Identification certification is recommended for all imported horses. Your own area's Horse breeding association's identifier you are able to find from website [www.hevosjalostusliitot.fi](http://www.hevosjalostusliitot.fi)**

1. Horse can be marked in to the database with or without its pedigree information. When the horse is marked with its pedigree information it needs to have a passport granted by Horse breeding association or separate breeding certificate attached.
2. Write down on the form horse's color, marks (also possible brand) and microchip number. Owner is responsible for that the identification information informed in the passport match with the horse.
3. **Horses that are born and identified for passport after 1.7.2009 need to have microchip.** If the horse doesn't have microchip, it needs to be microchipped before the information can be saved in to the database. Except for the countries, where brand is being used as an accepted identification method.
4. **In case the horse is microchipped, needs the microchip number from the passport be written to the form, so the horse's information can be saved in to the database.** Owner is responsible that the microchip has been read and it can be found from the horse.
5. Attach original passport and possible other attachments with the form. The database will have markings, if the import certificate has been shown. However, it is owner's responsibility to retain the certification for five years, despite has it been checked while saving the information to the database.

## REPORTING HORSE WITH EU-PASSPORT TO THE DATABASE

Horse/pony will be saved to the database with its name information, without pedigree information, price 70 euros.

Horse/pony will be save in to the database with its pedigree information, price 95 euros.

The price will be added postal / handling cost according to an existing price list

Horse's / pony's name	Gender
UELN-/register number	SRL-number (if there is)
Breed	Date of birth

Horse's color (for grey also color of birth)
Horse's marks (head, neck, body, legs, hoofs, brand)
Microchip number

I assure that the passport and the horse that I'm reporting match each other.

Attachments with this form:

Original horse passport

Copy of TRACES-health certification or other similar certification / border inspection certification

Other, what \_\_\_\_\_

Owner Name	Date of birth	
Address	Email address	
Postal code	City of post office	Phone number

I want the passport to be sent with cash on delivery

If the part above is not selected, the passport will sent back as a normal letter transmission. Cash on deliveries are a part of postal tracking service, so if the passport goes missing or gets damaged, it's possible to apply for compensation. Suomen Hippos ry doesn't compensate costs from missing or damaged deliveries.

With my signature I certify the information provided on the form correct and assure that I have the ownership of the horse mentioned above.
